Backend Engineer | Ruby on Rails | 4+ years

Bengaluru | India

PROFESSIONAL SUMMARY

Backend Engineer with **4+ years** building production-grade scalable REST API systems in Ruby on Rails at a high-growth startup. Owned end-to-end delivery of identity verification, async job pipelines, and notification infrastructure. Deep experience designing APIs for high-traffic mobile clients — strong grasp of latency, reliability and versioning constraints.

TECHNICAL SKILLS

Backend: Ruby on Rails, ActiveRecord, ActionMailer, Sidekiq, MySQL, Redis, AWS Rekognition

Mobile: Android/Kotlin — API integration & cross-layer debugging

Tools: Git, New Relic, Postman, FCM – push notifications

Exposure: Docker, AWS, CI/CD, Python, Node.js, React.js

WORK EXPERIENCE

Software Development Engineer – Backend | Smartstaff, Bengaluru | Dec 2021 – Jan 2026

- Delivered REST APIs in Ruby on Rails powering a **25K+ peak-user** mobile platform, enabling cohort-based feature rollouts and dynamic user segmentation.
- Built Sidekiq-based async pipelines handling push notifications, image processing, and reporting — **reduced processing latency by 20%** and improved reliability under 25K+ peak load.
- Architected a facial recognition and liveness detection system using AWS Rekognition, achieving **99%+ accuracy** — deployed for identity verification across **10K+ daily active users**.
- Built a notification monitoring system tracking delivery failures across app versions, triggering automated alerts to improve reliability and **reducing undetected delivery failures by 20%**.
- Improved API and query performance through caching strategies (Redis) and query optimisation, **reducing P95 response latency by ~30-40%** under peak load and N+1 query elimination.
- Maintained versioned REST APIs across multiple app releases, ensuring backward compatibility for legacy clients while shipping new features — reduced forced-upgrade friction for field users.
- Designed MySQL schemas and managed ActiveRecord migrations for core platform entities — ensured zero-downtime deployments and data integrity.
- Led API design for mobile clients — **defined contracts across 40+ endpoints**, reviewed PRs, and reduced integration bugs by enforcing schema validation at the API layer.
- Leveraged Android client ownership across 3 apps to debug cross-layer API issues — reduced mobile-reported backend bugs through direct integration testing.

Software Development Engineer L3 | Merkle Sokrati, Pune | Jul 2019 – Sep 2021

- Led engineering delivery for enterprise client mobile apps serving **1M+ downloads** — owned technical execution, releases and cross-team coordination.
- Managed and mentored a cross-functional team of **12 engineers** (Android, backend, AEM, QA), **improving sprint predictability by 30%+** and achieving **90%+ sprint commitment rate**.
- Reduced post-release defects by ~30%** through structured code reviews, test coverage standards and systematic estimation.

EDUCATION

B.Tech. Computer Science & Engineering | Manipal University Jaipur | 2015 – 2019 | CGPA: 8.08 / 10
